Introduction

It is illegal for individuals to conduct equity financing and issue digital currency in China, but there are many talents and projects that cannot obtain funds. International investors like Masayoshi Son have made many ineffective investments due to lack of understanding of local conditions, resulting in serious debts.

Taotesi has the ability to help them invest effectively, raise funds, and increase the flow of international capital and the speed of technological development. It will be mainly used in the popular AI field today.

How to get profit?

Currently, Taotesi has not established a company or become a formal organization, and has no team and investors.

So you can:

1. Purchase Taotesi TAO coins in advance, as a middleman to help introduce and contact investors, and benefit from favorable information such as organization and team growth.
2. Join the team to get Taotesi TAO coins.
3. After exchanging Taotesi TAO coins, do some helpful things in your spare time: promote, find questions, give opinions, etc. to increase the value of holding Taotesi TAO coins.
4. Other things that help Taotesi develop.

In this way, you can get the same profit return as holding the original stock to the stock market, and with the characteristics of tokens, the profit should be considerable.

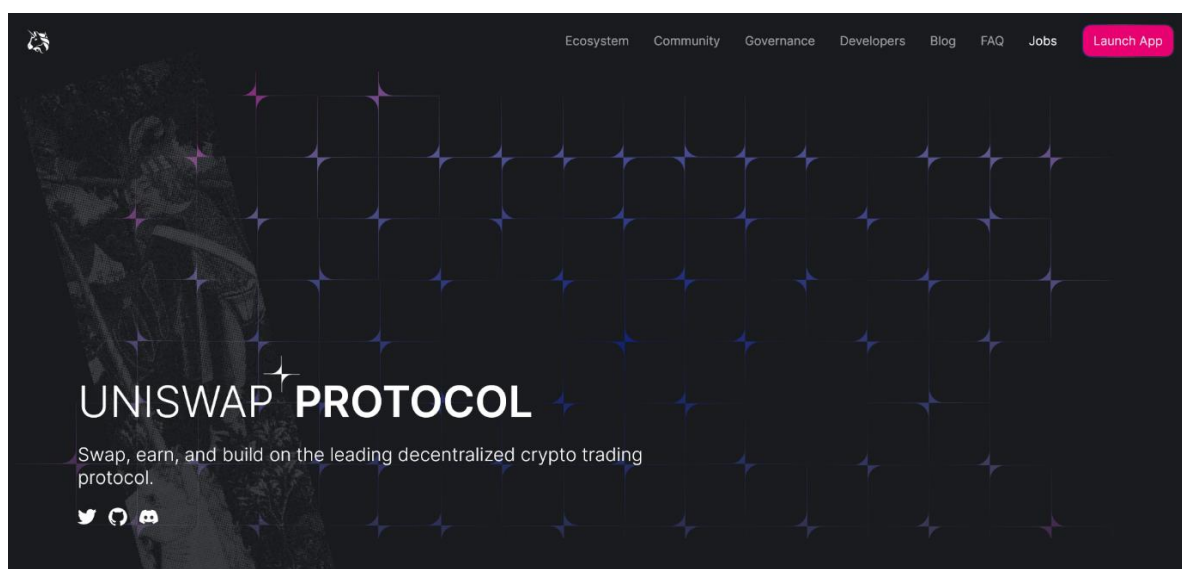

You only need to wait until the Taotesi team is formed, instead of waiting for a period of operation, making a profit, and going public to obtain considerable benefits like previous companies. Of course, you can continue to hold it for a long time and expect higher returns.

How to distinguish between true and false?

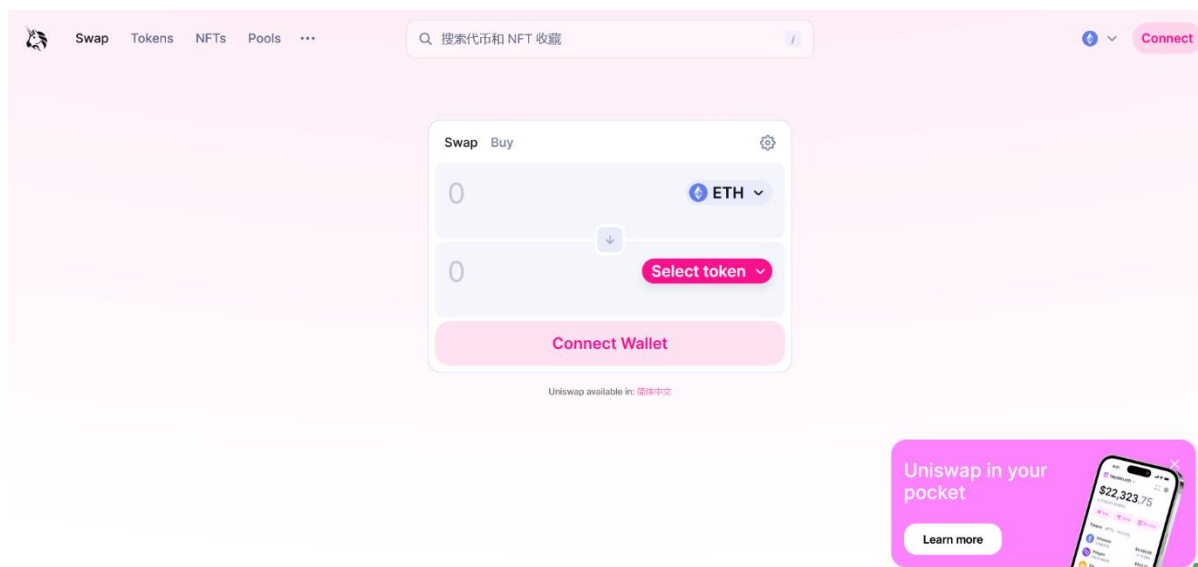

Carefully follow the swap methods described below, and will release information on the website and social media at milestone events such as successfully forming a team and obtaining financing. At the same time, the Taotesi TAO coins that have not yet been issued will be destroyed according to the plan, and these news will be made public on the website and social media.

Swap method

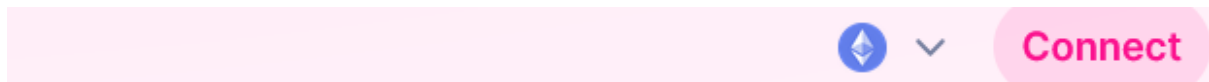

(It is recommended to use a VPN) It can be traded on the famous uniswap, first open: <https://uniswap.org/>, the display is as follows:

Click the button  in the upper right corner to open the following page:

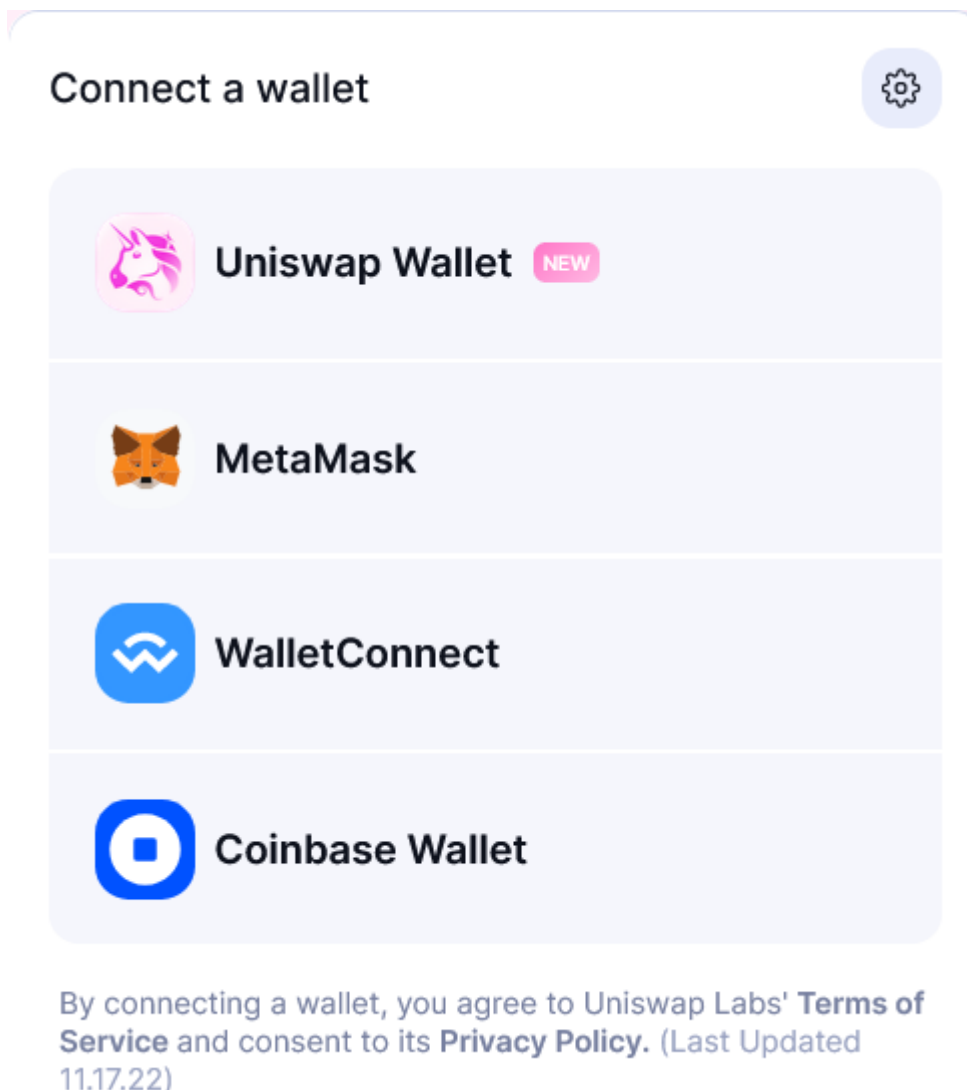

View the upper right corner as shown below:

Make sure that this icon  is displayed in the upper right corner, indicating that you are currently using Ethernet.

Clicking , display:

Choose the wallet to use. If you already have a wallet, trading platform software and APP, try to choose WalletConnect to connect to Binance, Ouyi and other wallets.

MetaMask can be held anonymously, and Coinbase Wallet can be registered under real names, depending on your own considerations.

Click  WalletConnect then display the following interface:

Use the mobile wallet APP program to scan the above interface. I am using Binance's DeFi wallet. Open the Binance mobile app. The interface is as follows:

1 TAO = <0.00001 ETH

\$9.51

Insufficient ETH balance

Here it shows that Insufficient ETH balance. If there is enough balance in the wallet, it can be swapped. It is recommended not to swap too much.

Legality

At present, I personally issue digital currency legally in countries other than China that support personal issuance of digital currency. Other currencies, organizations and individuals have nothing to do with me.

Safety

There are traces of my mailbox being hacked, and the intention and purpose are unknown. The transaction security of tokens is guaranteed by Ethereum and all participating explorers. Remember to keep the one you use called "wallet", and you can also buy a hardware wallet: Ledger.com.

Other problems

It's normal to have problems with everything, and you can raise them on public social media.

Reddit: <https://www.reddit.com/r/Taotesi/>

If the submission is a defect, please leave your wallet address. After the defect is confirmed and modified, you will get 10,000 Taotesi-Tao coins as a reward.

First time using wallet

When you use it for the first time, click on the wallet you want to use. If you don't have it, you will be prompted to create it yourself. Just follow the prompts to operate step by step. You can also find operation guides and tutorials on the Internet.

Unable to open, the content of the opened page is incorrect, or the connection error

It is recommended to use a VPN. The situation in each country and region is different. I cannot directly open some exchanges in China. In some countries, irrelevant pages will be displayed. VPN can solve most problems.

Can the country be swapped if it is sanctioned?

Countries like Russia, Cuba, can connect to the global network and can buy ETH. Using VPN to create a wallet in MetaMask is anonymous, and then send the purchased ETH to the wallet address of MetaMask through the Russian wallet address for purchase, so that you can buy less in case of accidents.
